

Plant F₁ HYBRID PETUNIAS IN 1955

BETTER GARDENERS now agree that first generation hybrid petunias perform better in every respect than the open pollinated, field grown varieties. Hand pollinated, F₁ hybrid varieties offer the controlled vigor with compact habit, uniformity, and colors heretofore unknown.

The outstanding success of petunias COMANCHE, BALLERINA and TANGO has prompted breeders of these varieties to develop and introduce four brand new F₁ hybrids. Extensive trials prior to introduction assure you of complete satisfaction.

THE NEW REDSKIN F₁ HYBRIDS!

PALEFACE 1

One of the top new varieties by any standard. Like COMANCHE, PALEFACE blooms in great profusion. Medium sized, white, slightly ruffled flowers.

F₁ hybrid vigor and uniformity makes this variety ideal for border or bed. 16 to 20 inches high.

APACHE 2

The bright, warm rose red color of APACHE goes well with the other "Indians" in any planting. Like the other "Redskins," APACHE is an F₁ hybrid multiflora.

Flower production is outstanding. Compact spreading habit, 16 to 19 inches high.

SIOUX 3

The beautiful warm tone glowing salmon color of SIOUX blends well with any color or combination—wonderful for use where the color problem is sensitive. This variety offers all the advantages of the other F₁ hybrid "Redskins"—vigor and uniformity with an amazing abundance of flowers.

F₁'S ARE ECONOMICAL AND EASY TO GROW

F₁ hybrids grow stronger and faster, are easier to grow. Fewer plants are required because of extra vigor. Allow plenty of room. Plants spaced 24 by 24 inches will give complete coverage by mid-July. Proper spacing prevents extra tall growth and falling over.

August blooming; highly wilt-resistant of course. — mixture.

BELL OF IRELAND (*Malucella Laevis*)

is an interesting novelty item. Plants grow about two feet tall and have long graceful stems for cutting. Both foliage and flowers are the same attractive light green color. Why the Mystery?

Why Shouldn't You Know What Is in a Good Lawn Grass Seed Mixture Before You Buy It You Should Know What You Are Buying

- FACT 1** The more Certified Illahee Creeping Fescue and Kentucky Blue Grass a mixture contains, the better the mixture.
- FACT 2** Both are Perennials and live indefinitely. However, they require two or three years to reach full maturity.
- FACT 3** Meanwhile they need quick-growing Red-Top and Rye Grass as nurse crops to shade them in their early growth.
- FACT 4** Your first year's lawn is mostly Red Top and Rye Grass.
- FACT 5** After a few years, Certified Illahee Creeping Fescue and Kentucky Blue Grass will be at their best; they form the permanent lawn.

BURNETT-SEEDSMEN'S "FORMULA NO. 1" is a NO. ONE

Lawn Grass Seed Mixture, because it is made up of 25% Illahee Fescue — 25% Kentucky Blue — 25% Red Top — 25% Rye Grass. Burnett-Seedsman's "Formula No. 1" is a balanced mixture. Burnett-Seedsman's "Formula No. 1" will grow in sun or shade.

BUILD LAWNS IN POOR SOILS WITH BURNETT-SEEDSMEN'S "POORSOIL LAWNMIX"

Drouth Resistant grasses is the answer to establishing a lawn in poor, sandy soils, for the same reason that camels, not horses, are used in the desert. — So, Burnett-Seedsman have selected the best drouth grass, namely, **Creeping Red Fescue** (Illahae strain). Because of its tolerance of drouth, Illahee is especially adapted to dry, sandy or gravelly soils—poor or rich. Illahee Creeping Red Fescue produces a deep rooted sod that withstands tramping and abuse. It spreads out, carpet-like, by means of underground rootstocks and overground stems. The grass blades are rich green, fine, smooth and soft; they stay green when other grasses brown and sear in Summer. Illahee is disease resistant; stands close cutting; grows in sun or shade and reaches full maturity in two years. It grows well with **Highland Bent**, also included in **Burnett-Seedsman's Poorsoil Lawnmix**. Highland Bent's growth habit somewhat parallels Illahee Fescue, especially being able to withstand adverse conditions of climate and low soil fertility. To these two permanent grasses is added a small percentage of domestic Rye Grass which acts as a nurse crop. Burnett-Seedsman's "Poorsoil Lawnmix" contains 75% Illahee Fescue, 5% Highland Bent and 20% domestic Rye grass, by weight.

Shady Place Lawn Grass Seed Mixture

Certain grasses, like certain flowers, revel and flourish in the shade. By including sufficient quantities of the shade loving grasses along with commodious amounts of the choicest dwarf and creeping grasses, you may be assured of a successful lawn in the shade. Remember, in shaded situation where the sun's rays do not permeate sufficiently to dry the ground, a damp and acid condition exists. It is well to add lime before sowing. 1 lb.

Sow ZOYSIA JAPONICA *(Japanese Lawn Grass)*

Pound sows 600 sq. ft. area.
 1 lb. \$3.00 10 Lbs. \$28.75
 only 5c per square foot

Zoysia japonica is a low growing, sod forming perennial which if not mowed, will grow to a height of about 9 inches. It has a broad, somewhat course leaf similar to Red Top, but does not grow as tall.

Zoysia japonica is the only variety of Zoysia which is hardy and will grow in the South as well as in the North. It should never be confused with Zoysia matrella which is of value only to the southern end of Florida where it is sold as sod under the name of Flawn.

It is generally believed that Zoysia japonica will be of great value for the following reasons:

- (1) Its ability to withstand heat, long periods of drought and extremely cold climates.
- (2) Its ability to crowd out Crabgrass as it is most dominant during the Crabgrass season.
- (3) Its ability to provide a green cover during the summer months when other grasses, such as Kentucky Blue, turn brown and ragged. It will also hold its color into the late fall longer than others.
- (4) Its ability to withstand heavy traffic and its extraordinary healing qualities.
- (5) The fact that it is disease free and weed free. So far none of the known pests have attacked it. It is immune to Chinch Bugs.
- (6) Unlike its cousin Flawn, Zoysia japonica forms a loosely knit sod and in its early stages blends and lives in harmony with other grasses, especially Blue Grass.

Gentlemen,

You asked to let you know when our zoysia lawn would to turn brown

Now, the end of November, it is still a perfect green. Our Zoysia lawns are the admiration of everyone - they could not be more perfect, and the \$500 I invested in Zoysia seed last Spring is far cheaper than spending \$500 for the usual hundred pounds of ordinary lawn seed and several hundred bags of fertilizer, and the labor of applying it all, every Fall, not to mention the daily Summer sprinkling of the lawns- something not needed for the Zoysia.

This much I will say-- it just is not practical to sow Zoysia seed alone to start a lawn. I would say the best plan for a new lawn is to sow it in the Fall, rather thinly, using mediocre grade of ordinary seed; let that come up-- you will have a fair quality lawn next Spring. Then that May, as soon as the ground is getting warm, go in and sow the Zoysia at the rate of 30 lbs. per acre, and rake it in, to get it down to the ground, and by August you will see it take a good hold- and by the Fall it will have driven out all the ordinary grass seed, and you will have a perfect Zoysia lawn.

Very truly yours

Joel E. Fisher

NODAMPOFF SPHAGNUM MOSS.

Sphagnum moss is a sterile material containing antibiotic qualities. Fungi and bacteria cannot live in it. By sowing seed in a thin layer of this moss spread over the soil in the pot or flat, damping off is prevented. Cuttings rooted in sphagnum are easily transported and transplanted without disturbing their roots. This moss is horticultural grade, milled ready for use. 10 oz. package,

HOW TO MAKE AN AIR LAYER WITH AIRWRAP!

1. Select branch 1/4 to 3 inches in diameter. Below a node, cut ring of bark (no less than 3/4 inch) off wood and scrape the wood clean

2. While cut is damp, apply plant foods and hormones by rubbing the plastic film on it. Now place a moist ball of moss around the cut

3. Then wrap an 8 x 9 inch sheet of plastic over damp ball of moss, bring edges together, fold over, twist ends and tie them securely

4. Within 3 to 8 weeks, when roots can be seen through film, wrappings may be taken off and branch cut from parent tree as new plant

The new way to control crabgrass—CRAG Herbicide-1 kills crabgrass seeds as they sprout in late spring and early summer. Crabgrass never gets started and lawn grasses thrive without its competition. CRAG Herbicide-1 is safe—doesn't discolor lawn grasses. Prevents weeds in vegetables and flowers too. Easy to use. Mix with water and apply with a garden hose sprayer, sprinkling can, or pressure sprayer.
